

Smoke Management and Air Quality for Land Managers

Take an online tutorial at your own pace and convenience

Smoke Management and Air Quality for Land Managers is an openly available online resource designed to meet the needs of federal and state land managers who require a working knowledge of air quality regulations and smoke management approaches. This course is a combination of conventional readings, interactive figures, and supporting case studies to help users:

- ✓ Understand Federal air quality and smoke rules and regulations
- ✓ Learn what other Land Managers have done to be successful managing smoke
- ✓ Experience the results of good collaboration and communication

To access a tutorial designed to take 60 to 90 minutes and advance your understanding of smoke and air quality issues facing land and fire managers go to:
